

# **PROJECT ENGINEER**

**GENERAL SUMMARY:** Delphinus Marine Engineering Division is seeking a candidate who can lead a range of design, engineering and logistics projects related to Shipboard HM&E, primarily Habitability. This position will involve assisting the Engineering Manager in various duties related to efficient functioning of the Design Team.

**LOCATION:** Norfolk, VA

## **DUTIES AND RESPONSIBILITIES:**

- Take control and maintain cognizance of certain systems, programs, processes, procedures or personnel vital to Engineering Division operation.
- Contribute to multidisciplinary engineering and design projects for shipboard systems related to Habitability, Fire Detection/Suppression, Aircraft Elevators, Foundations, Prefab Design, HVAC, Piping and Electrical.
- Make technical decisions and review and approve changes concerning material commodity systems and databases.
- Make technical decisions and approve changes concerning technical library assets.
- Oversee and assist in technical decisions made by Arrangement, HVAC, Piping and Electrical Designers.
- Oversee management, administration and selection of engineering software and related file-shares and systems.

## **REQUIREMENTS:**

- B.S. Degree in Mechanical or Electrical Engineering
- Experience with engineering and CAD software (AutoCAD preferred)
- Experience with or general understanding of databases
- Experience with creating, editing or reviewing NAVSEA drawings
